TAKA HAIR SALON

HAIRCHEMIST TREATMENT

focus on repairing and reinforcing internal damage caused by chemical services.

They strengthen the hair through cross-linking created by various agents.

Key Ingredient

Levulinic Acid

-It forms cross-links inside the hair fiber when heat is applied. It provides moisture and delivers a form-connecting effect to the hair.

ELLAPLEX

-It helps increase hair strength for damaged bonding which has been broken due to chemical or heat damage.

TOS-STEAM

-It reacts with heat, adding softness and elasticity.
